Brief Description

The Ferry/Ship and Fast Craft Ticketing System is a website that allows passengers to reserve and book ferry tickets online. Users can enter their personal information, choose their destination, and pay online or in cash. They can present their e-ticket or claim a printed ticket at the port counter.

Problem Statement

Passengers may experience long queues and inconvenience when purchasing ferry tickets at the port. Manual ticket booking can also make managing passenger information and reservations difficult. This system aims to make ticket booking easier, faster, and more convenient.

Objectives

- To provide an accessible website for ferry ticket booking.
- To allow users to enter their personal information.
- To let passengers select their desired routes.
- To provide online and cash payment options.
- To provide electronic and printed tickets.

Features

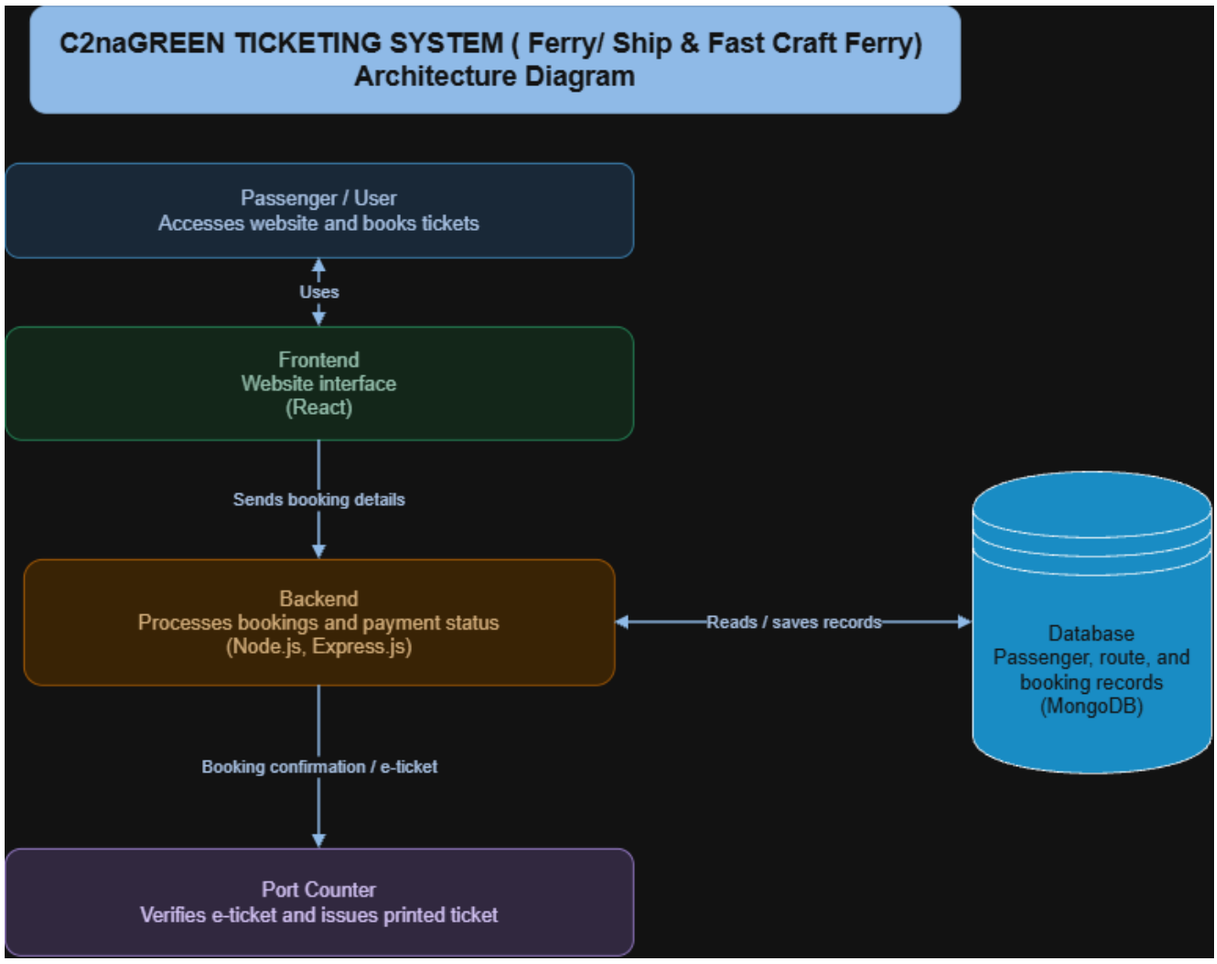

- **Web-Based Portal:** A responsive website accessible via desktop and mobile browsers.
- **User Registration & Passenger Details Form:** Secure input of passenger names, contact numbers, and addresses for the manifest.
- **Dynamic Route Selection:** Interactive scheduling where users can choose origin and destination points (e.g., Masbate to Pilar).
- **Reservation & Booking Module:** Real-time seat reservation system that locks in bookings.
- **Flexible Payment Gateway:** Options to pay via online channels (e-wallets/cards)

- **Digital E-Ticketing:** Generation of soft-copy tickets (with QR/Barcodes) for fast port-counter verification.
- **Admin/Ticketing Dashboard:** A backend interface for port agents to verify e-tickets, issue hard copies, and manage route schedules.
- **Refunds, Cancellations & Rescheduling :** Clear policy engine for ticket cancellation requests, refund processing statuses, and voucher issuance for cancelled trips.

Tech Stack

- **Frontend:** React
- **Backend:** Node.Js, Express.js
- **Database:** Mongodb
- **Code Editor:** Visual Studio Code

Architecture Diagram

Target Users

- Ferry/ship and fast craft passengers
- Tourists and travelers
- Port ticketing staff

- System administrators

Expected Benefits

- **Passengers:** Unmatched convenience through secure, advanced seat reservations and the elimination of waiting in long lines.
- **Port Operations:** Faster processing and boarding times through e-ticket scanning, reducing terminal crowding.
- **Data Management:** Highly scalable and efficient record-keeping of passenger manifests using NoSQL databases, improving reporting and operational analysis.

User Flow

- **Commuters & Travelers:** Individuals and tourists frequently traveling between islands via ferries or fast crafts.
- **Port Ticketing Agents:** Staff at the port counters who need to quickly verify digital tickets.
- **Shipping Line Administrators:** Management personnel who monitor daily passenger volumes, total sales, and route schedules.
